

Press Release

January 28th 2014

MBA Polymers to add new jobs at Worksop after major financial investment

Following its announcement last week (*24 January*) that it has received a new financial injection from its investors, Worksop-based MBA Polymers has announced that it will create around 15 new jobs and add an additional shift to the plant's operations. This expansion will happen in the late Spring/early Summer.

MBA is the world-leading multinational plastics recycling company who currently employ around 110 people at its UK site on Sandy Lane Industrial Estate, Worksop.

The new investment will allow MBA to expand its operations in Worksop to drive growth and further improve production efficiency.

MBA Polymers Chief Executive Nigel Hunton commented, "This expansion is dependent on the coming on-stream of EMR's new plant at Oldbury, Birmingham, the largest recycling plant in the UK which is currently undergoing start-up commissioning. In the future, MBA will receive an increased level of shredded plastic waste from cars from this plant which provides the raw material for MBA's recycled plastic end product. We are delighted that we will be adding jobs in this way and 2014 is looking very positive for MBA Polymers."

Recruitment will start in late April with the additional shift being introduced at the same time.

Ends

Notes to Editors:

MBA Polymers

MBA Polymers is the world leader at producing post-consumer recycled plastics from end-of-life durable goods. MBA produces pure, consistent, and reliably available materials which provide customers both cost advantage and price stability. MBA sources 100% post-consumer feedstock diverted from landfill or incineration and saves over 80% of the energy and 1-3 tons of CO₂ for each ton of virgin plastics replaced.
